Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-30, drawn to method a method for chemical mechanical planarization of a work piece having a ruthenium layer, classified in class 451, subclass 41.
- II. Claims 31-39, drawn to a planarization composition for chemical mechanical planarization using low contact pressures to remove ruthenium from a work piece, classified in class 451, subclass 285.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination is silent with respect to detail limitations of the composition. The subcombination has separate utility such as a planarization composition for chemical mechanical planarization using low contact pressures to remove ruthenium from a work piece.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Attorney **Deborah Henscheid** on 11/5/04 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
